

print → "abcde" → abcde

variables → name
var name =
 ↑
 assign "abc"
 ↓
 value

values → data types

char character
string text / word

'a' 'b' '1' '*'
— — —
"saayuj" "Mumbai"
"saayuj goes to DAV"
→ " " " " " "

int Number

1 2 -1 -100

float Decimal

0.001 , -1.3 , 2.14

Mathematical Operations

Addition +

Subtraction -

Multiply *

Divide /

Remainder %

Power

**

2 ** 3 = 8

Strings

first_name = "Saayuj"

last_name = "Deshpande"

full_name = first_name + " " + last_name

Upper case

full_name.upper() functions

lower case

full_name.lower() functions

predefined functions

Indexing

-6	-5	-4	-3	-2	-1
S	A	A	Y	U	J
0	1	2	3	4	5

$[0:2]$ $\Rightarrow$ SA
↑ starts from ↑ end before

$[5]$ $[-1]$ $\Rightarrow$ J

Lists → collection of multiple items

fruits = ["apple", "banana", "pineapple", "mango"]

0 1 2 3

fruits.append("mango")

append predefined function for lists

print(fruits[1]) ⇒ "banana"

fruits.remove("banana")

Assignment

python if-else

Arithmetic Operators

python - Division

Lists → append & remove index
square → ['a' , 'b' , 'c']

Set / tuple → list of unique items
('a' , 'b' , 'c')
rounded brackets.

Dictionary : key - value pairs

{ "name" : "saayuj" ,
"class" : ["8"] ,
"school" : "DAV" }

int → string

'8' + 7 ⇒ error

"8" + "7" ⇒ 87

8 + 7 ⇒ 15

If - else ← conditionals.

if (this happens):
then do this

else:

do this
number = 5

if number >= 5:

print("number is big")

else:

print("number is small")

Nested if-else

day = 2

if day == 1:

print("Monday")

elif day == 2: ✓

print("Tuesday")

else:

print("Not a day")

else if
